HERO SECTION

“Do users trust your AI?”

- Do people actually understand what your AI is doing?
- Are your **users** confident enough to delegate decisions?
- Where does **trust** break in your core flows?
- Does **your** onboarding build enough clarity?
- Is your **AI** earning confidence or just novelty clicks?

Your space is a challenge
Your TAM is too small
Your competitor just raised a huge round
Your team doesn't fit the right profile
Your revenue isn't high enough for us

Your space is a challenge
Your TAM is too small
Your competitor just raised a huge round
Your team doesn't fit the right profile
Your revenue isn't high enough for us♥

Headline: Measure Consumer Trust in Your AI Before It's Too Late

Sense AI is the only way to know whether people will trust your AI enough to actually use it and keep using it

Subhead (lighter color) : Will users delegate to your AI? Keep using it after errors? Feel empowered instead of replaced? We measure the trust signals that predict success.

[Submission Form:]

- **Product Description:** [Text input] Placeholder: "e.g., A mobile app that helps college students manage their finances" ↳ 1-2 sentences is enough

- **What You Want to Test:** [Text input] Placeholder: "e.g., Onboarding flow, AI recommendations accuracy, trust after errors" ↳ List 2-3 key concerns
- **Ideal Tester Profile:** [Text input] Placeholder: "e.g., College students ages 18-24 who use financial apps regularly" ↳ Give us the info and we'll find them

we're the first to measure what actually predicts ai product success

Traditional user testing tells you IF your product works. We tell you if users will trust it enough to actually adopt it.

The Problem

42% of companies abandoned most AI initiatives in 2025, up from 17% in 2024. (S&P Global Market Intelligence)

70-85% of AI projects fail. (Multiple industry reports, 2025)

Why? AI features require deeper trust, reliability, and explainability testing that surveys cannot measure. (Gartner — AI Trust, Risk & Security Management Predictions, 2024)

Every \$1 invested in UX research returns \$100. (Forrester Research)

The Stakes

Users don't give second chances to AI products that break their trust. The company that proves trustworthiness first captures the market. Will that be you or your competitor?

Founder Experience

Val & Manuela have collectively:

- Published 2x in peer-reviewed journals
- Built AI systems used by thousands
- Advised 50+ founders on product-market fit

How it works

<https://www.framer.com/marketplace/components/progress-bar/>

1. Define What You Want to Test

Tell us about your product and the users you're building for, and we match you with the right testers instantly.

2. We Test It With Real People

30-minute sessions combining traditional usability with AI-specific trust and behavior signals, full coverage in half the time.

3. Get Clear Answers, Fast

You receive an executive summary, trust metrics, recordings, key quotes, and clear recommendations, including a validation verdict: ready to launch or what to fix first.

See sample report button

We meet you where you are

Pre-Product | Pre-Revenue | Seed | Series A | Series B-C

"Great founders talk to customers before they even have a product. The very best founders in the world learn directly from their users throughout the life of their company."

"If you've correctly identified who your users are, you should learn from them." — Gustaf Alströmer, Group Partner, Y Combinator

Who We Work With

- **AI-Native Products** - Consumer apps built on AI as the core experience

Common industries: (dropdown)

- Personal finance & budgeting apps
- Education & tutoring platforms
- Health & fitness coaching
- Dating & relationship apps
- Productivity & workflow tools
- Content creation & creative tools
- Mental health & therapy apps
- Career coaching & job search
- + More

- **AI-Enhanced Operations** - Organizations deploying AI in customer-facing workflows

Common use cases: (drop down)

- AI customer service & chatbots
 - AI-powered sales assistants
 - Intelligent search & recommendations
 - Automated onboarding & support
 - Predictive analytics & insights
 - Content personalization engines
 - Virtual agents & copilots
 - AI-assisted decision support
 - + More

How many interviews should I do?

We don't win unless you win. That means recommending 10-20 focused tests that move the needle, not 100 tests that tell you what you already learned from the first 20.

A 2022 systematic review found that 9–17 interviews were typically sufficient to reach saturation in homogeneous qualitative studies.

The reality: 42% of companies abandoned most AI initiatives in 2025—not because they didn't test with enough users, but because they tested too late, with the wrong methods, or didn't test trust at all.

Our approach:

- **10-20 users reveal 85-95% of critical issues, the sweet spot for behavioral testing**
- **Faster iteration, Fix problems and test again, rather than waiting months for one massive study**
- **Clear signal, not noise, More users = more conflicting feedback that paralyzes decision-making**

For AI products specifically: 10-20 structured behavioral sessions give you everything you need to know whether users will trust, adopt, and keep using your product—without burning budget on statistically meaningless large-scale studies before you've validated the fundamentals.

Our job is to give you the truth, not the biggest invoice.

(red alarm) Most research firms charge \$15K-\$30K for what we deliver at a fraction of the cost.

Need more users? Let us know. We're flexible and can scale beyond 20 if you need quantitative validation. But for 90% of early-stage AI products, 10-20 tests will tell you exactly what needs to change before launch.

Launch and hope users trust your AI or Measure trust before launch and know exactly what to fix

Which makes more Sense

Ready to win the trust of your users?
